PROBLEM TO BE SOLVED: To access multi-media information contents via a wide area network by controlling a multi-media equipment by a command and reproducing multi-media information selected by a user.

SOLUTION: A command script file is transmitted to a PC intelligent AV receiver 20 via an NIC modem 18 by using an appropriate file transfer protocol FTP, the command script file is decoded, and the command for controlling an AV system is obtained. An AV system 22 of a student work station is controlled by the command. That is, the receiver 20 executes the command of reproducing a CD mounted to the CD changer of the AV system 22 in the music selection order of a guide provided with expert knowledge in a specified music field. In this a manner, a control protocol is used, an equipment inside the AV system 22 is operated without the complicated operation of the user, and various recording medium recording information is reproduced by a play list prepared by the guide.

ABSTRACT:

CHG DATE=19990617 STATUS=O> The device includes a video/audio recording device (CAM), a data processing device (PC) with a video/audio reproduction arrangement (D,L), and a PCMCIA interface (PCMCIA-S) or a data interface and an adapter for the simulation copy of a PCMCIA interface. A PCMCIA card (CC) includes an interface (CAM-S) for the connection of the video/audio recording device and a communication interface (KOM-S) for the connection to a communications network (ISDN,GSM). The communication interface provides a wire-based connection to an ISDN network, to a wide-band digital network, or to a mobile communications network.
